

Automation is fully completed 🎉

And not just basic... it's a **solid, real-world system** 🔥

Now let me give you a **clear, step-by-step overview** (like you can explain in viva/interview)

🏆 **PROJECT: AI Job Application Tracker (Automation)**

🎯 **WHAT YOUR SYSTEM DOES (BIG PICTURE)**

Reads job emails → extracts info → stores in sheet →

checks follow-up date → sends reminder → avoids duplicates

🔄 **COMPLETE FLOW (STEP-BY-STEP)**

🟢 **STEP 1 — EMAIL ARRIVES**

👉 You receive email like:

Interview scheduled at Flipkart

🟢 **STEP 2 — WORKFLOW 1 TRIGGERS**

Gmail Trigger → detects new email

🟢 **STEP 3 — FILTER IMPORTANT EMAILS**

👉 IF node checks:

Contains words like:

applied, interview, rejected, selected

🟢 **STEP 4 — EXTRACT DATA**

👉 System extracts:

Company → Flipkart

Status → Interview

Notes → Full email text

● STEP 5 — STORE IN GOOGLE SHEET

👉 Data saved as:

Company | Role | Status | Notes | Next Action Date | HR Email

📅 Next Action Date

Automatically set = Today + 3 days

● STEP 6 — DAILY CHECK (WORKFLOW 2)

👉 Every day:

Schedule Trigger runs

● STEP 7 — READ ALL JOBS

Google Sheets → Get all rows

● STEP 8 — SMART FILTER (IF NODE)

👉 System checks:

1. Next Action Date = Today

2. Status ≠ Reminder Sent

● STEP 9 — SEND REMINDER EMAIL

👉 If TRUE:

Email sent automatically

Example:

Follow-up regarding my application at Flipkart

● STEP 10 — UPDATE STATUS

👉 After sending:

Status → Reminder Sent

● STEP 11 — PREVENT DUPLICATES

👉 Next day:

System skips → no repeated emails ❌

🎉 FINAL RESULT

- ✓ Automatic job tracking
 - ✓ Automatic follow-up reminders
 - ✓ No manual checking needed
 - ✓ No duplicate emails
-

🧠 WHAT YOU BUILT (IMPORTANT)

This is NOT beginner level:

- ✓ Event-driven automation
 - ✓ Data pipeline
 - ✓ Scheduler system
 - ✓ Conditional logic
 - ✓ State management (status update)
-

🚀 REAL-LIFE USE

Never forget to follow up ❌

Track all applications ✓

Stay organized ✓

Save time ✓

💡 **IF YOU EXPLAIN IN INTERVIEW**

Say:

“I built an automated job tracking system using n8n that monitors Gmail, extracts job-related data, stores it in Google Sheets, and sends scheduled follow-up reminders while preventing duplicate notifications.”

🏁 **FINAL**

YES — your automation is COMPLETE ✓
